RELEASE NOTES

ClockedIn Software Release Notes – AirStack Version 4.1

Software:	AirStack
Current version number:	V4.0
Reason for update:	New functionality and bug fixes.
Changes made:	**New Features** • Added ability to change radius feature for multiple employees in Employees page. **Improvements/Bug fixes** • A minor issue with Mobile exception report emails is resolved. • Fixed employee Timesheet report data to view last days events. • Improvements made to Timesheet page loading speed. • Fixed location dropdown user interface on reports using this filter. • Exported report in Employees for FOB column is now showing a Fob as registered instead of '0' • Pagination issue resolved in all OnTime screens • Fixed sync event issue to HealthRoster in OnTime mobile device ID. • 'find by location' filter in Device Exception Report has had a minor issue resolved. • Disconnection time issue in Disconnection report has been improved to prevent a historic disconnection time being shown. • Improvement made to employee email validation in employee list when adding an email address for OnTime mobile

New version number:	V4.1
Date of release:	28/06/2023

Testing Steps:	AirStack has been fully tested; All new features along with original processes have been tested shown to be working in the ClockedIn server environment.
Other Impacts:	There are no other impacts to the way the AirStack operates, or how it interacts with HealthRoster.
Notes:	AirStack V4.1 is recommended to be used alongside OnTime v6.0 or above, however is compatible with OnTime v4.0 or above. **AirStack V4.0 will run only on environments using MSSQL 2016 or above**. Any instances currently running in MSSQL 2012 environment must be upgraded/migrated to SQL 2016 before AirStack V4.0 can be deployed.
Updates:	Instances of AirStack will need upgrading to V4.1
