

The SmartHubPro

Infra-Red Vein Recognition Technology

Introducing SmartHubPro

SmartHubPro stands at the forefront of biometric technology, offering an all-in-one solution for businesses and organisations seeking unparalleled protection. With its advanced infrared vein scanning technology, coupled with facial recognition, RFID, and PIN code capabilities, SmartHubPro delivers a multifaceted approach to secure access like no other.

Unrivalled Security with Vein Recognition

SmartHubPro's infrared vein scanning technology offers a secure and contactless way to identify individuals based on the unique vein patterns in their palms. This state-of-the-art method provides unparalleled security features.

Highly Secure: Almost impossible to replicate, ensuring your premises remain protected.

Consistent and Reliable: Vein patterns do not change, offering dependable access control over time.

Hygienic Contactless Authentication: Prioritises user safety and convenience.

Enhanced Features & Applications

- **Facial Recognition:** Efficient and rapid identification for streamlined access.
- **RFID Compatibility:** Seamlessly integrates with existing RFID systems for flexible entry solutions.
- **PIN Code Protection:** An added security layer for comprehensive protection.

Sleek Design & Unprecedented Speed

- **Sleek New Design:** SmartHubPro features a modern, aesthetic design that fits any environment.
- **10x Faster:** Experience lightning-fast identification, making it 10 times faster than previous models.

Versatile Application Across Industries

SmartHubPro is the ideal solution for:

- Corporate offices
- Healthcare facilities
- Construction sites
- Educational institutions
- Government buildings
